

# YES Ultimate EFAs Plant Based Essential Fatty Acid 4oz / 118ml

YES Ultimate EFAs are the perfect alternative for vegans and vegetarians who are required to supplement their essential fatty acids intake, parent essential oils are an ideal source.

Parent essential oils are vital for you health, the body cannot manufacture essential oils but they are required by every living cell in you body, so they must be replenished by the food you eat in your diet.

Because of modern food processing methods many of the essential fatty acids in the food that you eat have been altered and lost their effectiveness due to these processing methods.

This product is a natural organically produced cold-pressed essential oil produced from seed oils that are high in parent Omega-6 and Parent Omega-3.

Oils from seed oil are more effective and pure than those produced from fish oil, what can be contaminated by heavy metals such as mercury.

Because vegans cannot eat fish or consume fish oil supplements parent essential oils are a great way to get these vital nutrients from a totally vegan source.

The high quality and totally organic oils are cold pressed, helping them to maintain their maximum benefits and not destroying any of the essential omega oils in the process.

The contents of this amazing product include organic sunflower oil, organic high linoleic Safflower oil and a small amount of organic Evening Primrose oil, what are great natural sources of "parent" omega 6, plus the added goodness of organic flax oil for "parent" omega 3, making this product one of the most advanced scientifically proven beneficial omega 3 and 6 combinations available.

Because all these oils are derived from plants the product is ideally suited to vegans and vegetarian, but is equally beneficial to those who follow an unrestricted diet.

This product provides a balanced combination of these two essential oils in one product. Purity and quality are the key features that make this a superior omega essential fatty acid supplement.

Because the oils in this product are manufactured in small batches, the quality is maintained and the purity and strength is guaranteed.

No pesticides are present in this product and the organic labelling is endorsed by certification that all the ingredients come from certified organic sources.

Because the method of temperature pressing is used to extract the oils from the plant material no refrigeration is need as the oils will not turn rancid or start to smell.
